DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-17 (in part) and 23-26 (in part), drawn to Q^3 = 7-9 membered ring with 2 nitrogens, classified in class 540, subclass various.
- II. Claims 1-8 (in part), 11-17 (in part) and 23-26 (in part), drawn to Q^3 = 5-membered ring with one nitrogen, classified in class 548, subclass various.
- III. Claims 1-8 (in part), 11-17 (in part) and 23-26 (in part), drawn to Q^3 = 6-membered rings with one nitrogen, classified in class 546, subclass various.
- IV. Claims 1-8 (in part), 11-17 (in part) and 23-26 (in part), drawn to Q^3 = 7-membered rings with one nitrogen, classified in class 540, subclass various.
- V. Claims 1-17 (in part) and 23-26 (in part), drawn to Q^3 = others, classified in class 544, subclass various.

The inventions are distinct, each from the other because of the following reasons:

Groups I-V are directed to structurally dissimilar compounds such that the variable core created by the varying definitions of Q^3 in formula I do not belong to the same recognized class of chemical compounds in the art, and references anticipating one invention, would not render obvious the others. For example, Group I is drawn to a 7-9

Art Unit: 1624

membered ring with 2 nitrogens and is different from Group II-V. Group II is drawn to monoazoles and is different from Group I or Groups III-V, since this is not present in other groups. Group III is different from other groups, since it is drawn to monoazines (6-membered ring with one nitrogen). Group IV is drawn to a 7-membered ring with one nitrogen and is different from Groups I-III and Group V. Group V is drawn to others (Groups that don't fall into Groups I-IV, e.g. 6-membered ring with 2 nitrogens) and it is different from other groups. Thus, separate searches in the literature as well as in the U.S. Patent Classification System would be required. Each group's compounds are made and used independently of each other and could support separate patents. The compounds differ significantly in chemical structures. One skilled in the art would not consider such diverse structure equivalents of each other.

Because these inventions are distinct for the reasons given above and have acquired separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

In addition, applicants have to elect a single disclosed species.

A telephone call was made to Mr. Roland Martin on Sept. 10, 2004 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
